### Goals

The goal of Sprint 3 was to power through the rest of the client's demands. Much was implemented in this sprint:

*Shop:* the big goal of this sprint. We implemented the storefront, cart, and orders interfaces as well as the reserve system with email receipt functionality. In order to ensure consistency, please ensure that there is at least one item category before attempting to shop (there will be a descriptive error if there is not). Orders can either be confirmed or canceled but not both. Anyone may cancel their own orders, and staff can cancel any order. Only staff can confirm an order to signify that it has been shipped/delivered/picked up/etc. Let us know if there are any questions regarding this feature.

*Editable text:* all text on the Home, About Us, and Contact pages is editable. The homepage has a variable amount of "panels" that the user can create, edit, or destroy as necessary, and the slider images are customizable. The pictures on most pages can also be replaced at will.

*Mass Email:* staff with enough permissions are able to send mass emails to the clients that wish to receive them. This is accessed via the "Emails" link in the navbar.

*Email:* the store email has been set up, and is [support@silverandstones.gallery](mailto:support@silverandstones.gallery). All contact to and from the website comes from this email address. Any time mail is sent from the website to the store, it is both sent and received by [support@silverandstones.gallery](mailto:support@silverandstones.gallery).

*Gallery:* this was a client request. Essentially, the client wanted a picture gallery on the website. It was not terribly difficult to implement, so we obliged. You are able to add, edit, and delete entries from the gallery. Gallery entries are paginated, with 9 entries per page.

*Testing:* existing tests were pored over to ensure the smoke tests passed. We wrote some new tests to handle the new features, where it was possible to do so. You may inspect the most recently run regression test by visiting <http://silverandstones.gallery/output.html>.

*Reference Book:* the book that explains the functionality of all of the moving parts of the system was created. This will help ease the transition to a client-run system.

If you have any questions as to how best to use any of the new functionality, feel free to send us an email.
