Sprint 1 Usage Instructions
Team Ramrod (Ben, Lucas, Cody, Tom)

Access Instructions

The live website can be accessed at 104.131.126.124:3000. It's hosted on a Digital Ocean droplet, so domain names have not yet been configured. If the server is down when you try to access it, shoot Ben an email (christbj@uwec.edu) and we'll get it back up and running ASAP.

The administrator username and password are "*admin*" and "*admin*" respectively.
You should be able to log in and out without any issues. Sessions persist as long as the browser window remains open.

Users that are logged in currently have full privileges to the user system, but the links have not been added to the website just yet. In order to do the "hidden" functionality, please try the following links (provided you're logged in):

104.131.126.124:3000/users/new (Create a new user)
104.131.126.124:3000/users/1 (Show the admin user)
104.131.126.124:3000/users/1/edit (Edit the admin user)
In the above examples, the "1" represents the database ID of the user in question. Since there is not a users list just yet, if you create a user, please change it to a number (more than 8, but probably less than 15) if you want to edit/view that user. It will report errors unless the user exists, so keep trying if it doesn't.

On the show page for a user, you are allowed to delete that user. Please avoid deleting the admin user. Any further users that you add can be deleted without trouble.

Code Base

Our code base is accessible at http://github.com/alephtwo/cs485. The repository was originally private, but has been made public for your ease of viewing. If you would like, we can keep it a private repo and invite you as a collaborator (the repository is fairly large and would be cumbersome to send via D2L. Database connections would also need to be configured with a file (secrets.yml) that has not been and will not be checked into source control.) If you would like a runthrough of the code base, don't be afraid to ask.
